Why I like SuperMath?

I like SuperMath because it helps me in school in math. Not only are the teachers fun and encouraging, they help me learn so much. The way they teach is easy to understand and catch on. Another thing I like is the prize points. They are something you can look forward to every class and every time I pass a test.

Starting at the lowest level – Book 14 and working my way up to where I am now – book 4 gives me a sense of accomplishment. I now look forward to my classes because my class is a fun environment to learn. It's not just abacus, there are also jokes and chatter. I am so happy when I pass a test.

When it first started, I learned that math is not about memorization. They don't want you to memorize facts. They want you to understand why and how you got it right or wrong. It's another efficient way of learning math. There are some of the reasons why I like SuperMath – only SOME.

If I wrote all of them, I would not be able to fit them all on one page. Anyhow, I think SuperMath is a wonderful organization and I am very, very lucky to have this opportunity to learn abacus.
